

FindItNow – Real-Time Lost & Found Management System

<i>Team Name: ARMS</i>	
Team member 1 (Team Lead) <i>Aditya Nautiyal</i> <i>Uni roll no -241817</i> <i>Student id-,2401115</i> <i>Email id-,adityanautiyalcreature@gmail.com</i>	
Team member 2 <i>Sarthak kotnala,</i> <i>Uni roll no-2418913</i> <i>Student id-24011403</i> <i>Email- sarthakkotnala223@gmail.com</i>	
Team member 3 <i>Mahak gupta</i> <i>Student id-24012387</i> <i>Uni roll- 2418623</i> <i>Email- gmahak14@gmail.com</i>	
Team member 4 Rishu Anand Sec E2 Roll - 45 Enroll No.: PV-24180841 University Roll No.: 2418841	

- **PHASE 2 DESCRIPTION**

- **Current Progress**

- The second phase of the project has reached approximately 50% completion. The system has moved from theoretical design to actual implementation. Core backend logic has been developed, including user data storage and handling mechanisms.

- **Implemented Components**

- - Main system structure implemented in main.c
- - User database module implemented in user_db.c
- - Basic database stored in users.txt with user IDs, names, and points
- - Initial testing of data storage and retrieval completed

- **Database Status**

- The database is currently file-based and stores user records. It supports insertion and retrieval operations. Some minor inconsistencies in file data indicate the need for better validation and structured formatting.

- **Work Distribution**

- Sarthak is responsible for front-end development using HTML, which will later integrate with the system.
- Mahak is handling database design and core database manipulation logic.
- Rishu is working on advanced database manipulation and implementing search algorithms.
- Aditya is responsible for integrating all modules and ensuring smooth communication between components.

- **Challenges Faced**

- - Managing file-based database consistency
- - Handling corrupted or unstructured data entries
- - Coordinating module integration across team members

- **Next Phase Plan**

- - Improve database structure and validation
- - Implement efficient search and matching algorithms
- - Integrate front-end with backend logic
- - Enhance system stability and error handling

- **Conclusion**

- Phase 2 shows steady progress with a working backend foundation. The system is evolving into a functional prototype, and further improvements will focus on optimization, integration, and user interaction.
- Hriday Kr Gupta (GEHU and You tube)
